

TAO XIE

UNDERGRADUATE RESEARCHER · TIME-SERIES MACHINE LEARNING

wyyxxadll@gmail.com | [Homepage](#) | [Google Scholar](#) | [GitHub](#) | [ORCID](#)

RESEARCH PROFILE

Fourth-year Automation undergraduate in the selective Outstanding Engineer Class at Guangdong University of Technology. My work studies reliable and interpretable learning from heterogeneous, sparse, and shifted time-series observations. I have three published first/co-first-author papers at KDD, IEEE BIBM, and PRICAI.

EDUCATION

Guangdong University of Technology · Undergraduate in Automation

2023–2027

(expected)

Outstanding Engineer Class · School of Automation · Guangzhou, China

RESEARCH EXPERIENCE

OMG Lab / SIGMTA, Guangdong University of Technology

Mar 2025–

Present

Undergraduate Researcher · Advisor: Prof. Yiqun Zhang; collaboration with Prof. Yiu-ming Cheung

- AnchorMoE introduces an intrinsically interpretable mixture-of-experts framework for multivariate time-series classification; the paper evaluates 18 UEA datasets and reports top-2 results on all 36 ACC/F1 entries, including 28 best results.
- DE3S studies soft-sparse shape learning for medical early classification across six datasets; the paper reports leading results at every tested early window on three datasets.
- MEET-Sepsis studies sparse early clinical observations through endogenous multi-view learning; the paper reports the best result in 83 of 88 scenarios below 12 hours on two PhysioNet-derived cohorts.

SELECTED PROJECT

Interpretable Generative Classification for Non-stationary Time Series

Nov 2025–

Present

Provincial Undergraduate Innovation Training Program · Primary Lead

Developing intrinsically interpretable generative modeling for non-stationary time-series classification, with medical and industrial decision settings as target applications.

SELECTED HONORS

Grand Prize (highest award), Global AI Scenario Innovation Competition (core member), 2026 · National First Prize (highest award), Big Data Application—Big Data Practice Track, China Collegiate Computer Design Competition (second lead), 2025 · National Second Prize, China Undergraduate Physics Experiment Competition (Innovation; core member), 2025

Competition record: 1 international grand prize (the event's highest award), 2 national awards, and 3 provincial awards. Innovation training: primary/core lead on 4 projects (2 national-level, 2 provincial-level).

SKILLS & INTERESTS

Python · PyTorch · Git | Interpretable time-series learning · early/sparse classification · anomaly detection
